## Short Manual

### PIKO Inverter 3.0 - 20

PIKO 8.3 available from Q2 / 2015

# EU Declaration of conformity

The company

KOSTAL Solar Electric GmbH  
Hanferstraße 6  
79108 Freiburg i. Br.  
Germany

hereby declares that the inverter **PIKO 3.0 starting from FW 5.0** to which this declaration refers, conforms to the following guidelines and standards.

## European Standards including relevant amendments

EN 61000-3-2:2006 / A1:2009 / A2:2009 (Harmonic currents)

EN 61000-3-3:2008 (Flicker)

EN 61000-6-2:2005 / AC:2005  
(Interference resistance for industrial environments)

EN 61000-6-3:2007 / A1:2011  
(Interference emission for domestic environments)

EN 62109-1: 2010 (safety of power converters Part 1)

EN 62109-2: 2011 (safety of power converters Part 2)

Directive 2004/108/EC Electromagnetic compatibility

Directive 2006/95/EC Electrical Apparatus Low Voltage Directive

Application of the CE marking in accordance with Appendix III, Section B:2013

KOSTAL Solar Electric GmbH – 2012-12-18

Werner Palm (Managing Director)

Armin von Preetzmann (Development Manager)

This declaration applies to all identical copies of this product.

This declaration loses its validity if the device is modified or incorrectly connected.

This declaration certifies compliance with the mentioned regulations but does not ensure the properties.

The safety instructions in the product documentation provided must be observed!

# EU Declaration of conformity

## The company

KOSTAL Solar Electric GmbH  
Hanferstraße 6  
79108 Freiburg i. Br.  
Germany

hereby declares that the inverter **PIKO 4.2, 5.5, 7.0 starting from FW 5.0** to which this declaration refers, conforms to the following guidelines and standards.

## European Standards including relevant amendments

EN 61000-3-2:2006 / A1:2009 / A2:2009 (Harmonic currents)

EN 61000-3-3:2013 (Flicker)

EN 61000-6-2:2005 / AC:2005  
(Interference resistance for industrial environments)

EN 61000-6-3:2007 / A1:2011  
(Interference emission for domestic environments)

EN 62109-1: 2010 (safety of power converters Part 1)

EN 62109-2: 2011 (safety of power converters Part 2)

Directive 2004/108/EC Electromagnetic compatibility

Directive 2006/95/EC Electrical Apparatus Low Voltage Directive

Application of the CE marking in accordance with Appendix III, Section B:2013

KOSTAL Solar Electric GmbH – 2014-09-30

Werner Palm (Managing Director)

Armin von Preetzmann (Development Manager)

This declaration applies to all identical copies of this product.

This declaration loses its validity if the device is modified or incorrectly connected.

This declaration certifies compliance with the mentioned regulations but does not ensure the properties.

The safety instructions in the product documentation provided must be observed!

# EU Declaration of conformity

The company

This declaration loses its validity if the device is modified or incorrectly connected.

This declaration certifies compliance with the mentioned regulations but does not ensure the properties.

The safety instructions in the product documentation provided must be observed!

# Proper use

The PIKO Inverter converts DC current into AC current.

The current can be used for the following:

- for consumption
- for feeds into the public mains grid

The unit may only be used in grid-connected photovoltaic systems within the permissible power range and under the permissible environmental conditions. The device is not intended for mobile use.

Inappropriate use can be hazardous and lead to injury or even death of the user or third parties. Material damage to the device and other equipment can also occur. The inverter may therefore only be used for its intended purpose.

## Additional User Information

For additional information, please read the complete operation manual on the CD.

## Exclusion of liability

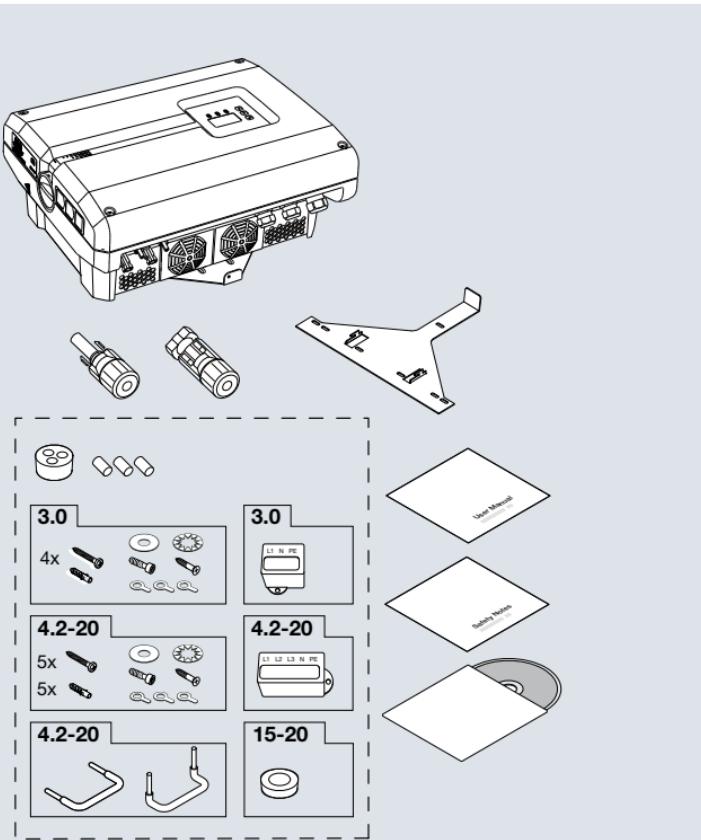

Any use that differs from or goes beyond the stated intended purpose is considered inappropriate. The manufacturer accepts no liability for any damage resulting from this. Modifications to the inverter are prohibited. The inverter may only be used if safe to operate and in technically perfect condition. Any instance of misuse will cause the termination of the warranty, guarantee and general liability of the manufacturer.

Only a qualified electrician may open the device. The inverter must be installed by an electrician who is responsible for observing the applicable standards and regulations. Work that could affect the electrical power system of the respective utility company at the site of the solar energy feed-in may only be carried out by qualified electricians expressly authorised (licensed) by the utility company.

This includes changes to the factory preset parameters. The installer must always observe the regulations of the utility company. The utility company's specifications must always be observed when setting the parameters.

- 1** Name and address of manufacturer
- 2** Device type
- 3** Item number
- 4** MPP control range
- 5** Maximum DC input voltage
- 6** Maximum DC short circuit current
- 7** Number of feed-in phases / Output voltage (nominal)
- 8** Maximum AC power
- 9** Maximum AC output current
- 10** Deviating output with country setting
- 11** Protective class to IEC 62103
- 12** Protection type and ambient temperature range
- 13** Overvoltage category
- 14** Requirements conforming to those of the built-in grid monitoring
- 15** Internal item number
- 16** Serial number
- 17** Version of hardware
- 18** Version of parameter set
- 19** Version of firmware
- 20** Version of user interface
- 21** Date of the last update
- 22** Removable guarantee label

# Selecting the installation side

## NOTE

Observe the following instructions, or else warranty claims will be restricted.

Protect from rain and water.

Protect from direct sunlight.

Select non-flammable installation location.

Maintain safe distance from flammable materials or areas at risk of explosion.

Select vertical installation location.  
Use the included wall bracket.

Ambient temperature must be between -20 °C and +60 °C.  
Air humidity must be between 4 % and 100 % (condensing).

Select stable installation location.  
No plasterboard or wooden walls.

Prevent access by children.

Required cooling space is 200 mm vertical and  
100 mm horizontal.

Protect from dust, contamination and ammonia.

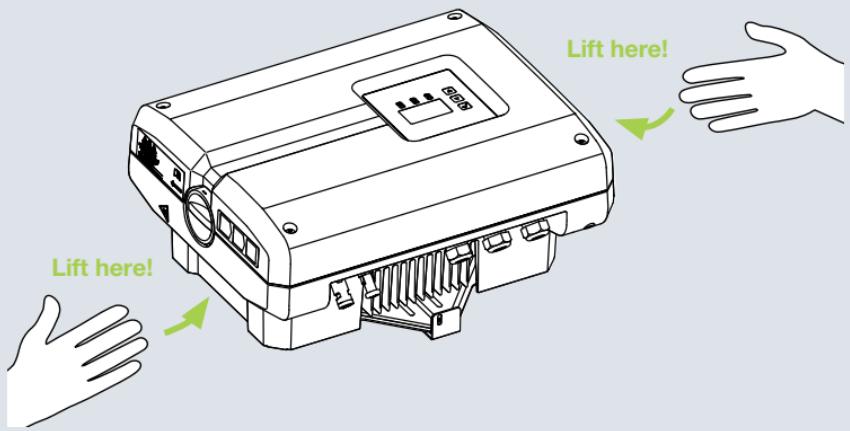

Ensure easy access and visible display.

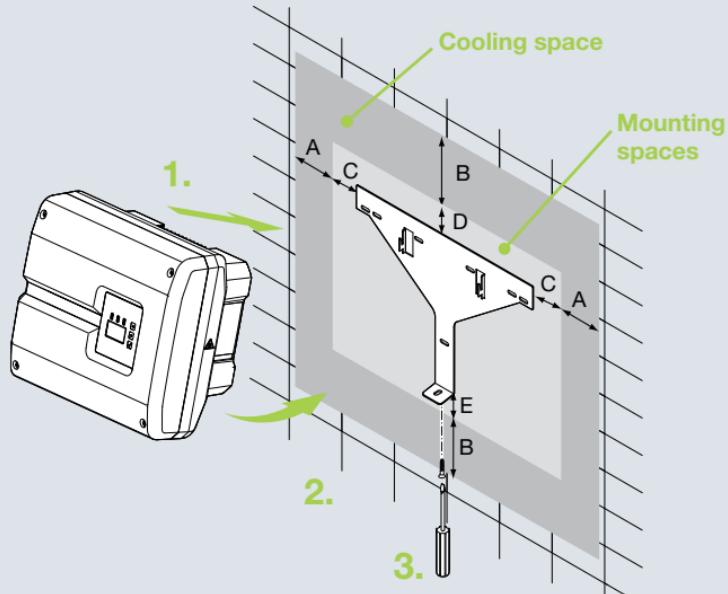

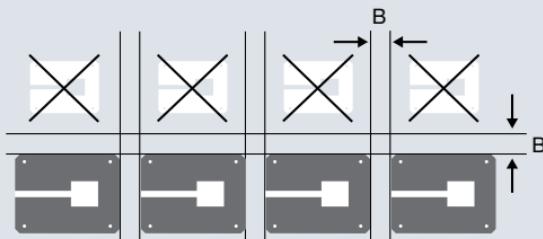

Ensure that people are not disturbed by operating noise.

# Installation

## To lift the inverter

## To install several inverters

### Inverter Type

### Measures in mm (inch)

	A	B	C	D	E
PIKO 3.0, 4.2 - 7.0	100 (3.9)	200 (7.9)	60 (2.4)	70 (2.8)	2 (0.1)
PIKO 8.3 - 12	100 (3.9)	200 (7.9)	66 (2.6)	35 (1.4)	2 (0.1)
PIKO 15 - 20	100 (3.9)	200 (7.9)	76 (2.99)	46 (1.8)	2 (0.1)

## De-energising inverter:

1. OFF  
Switch off DC side at Inverter
2. OFF  
Switch off - AC side - So/AL-Out
3. Safeguard
4. Disconnect DC side
5. Wait 5 minutes

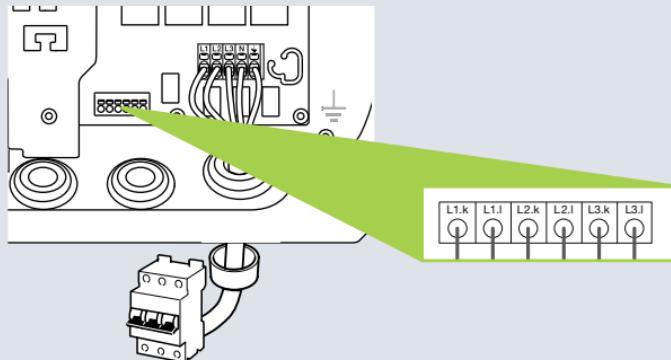

# Connecting AC and DC side

## Connecting AC side and current sensor

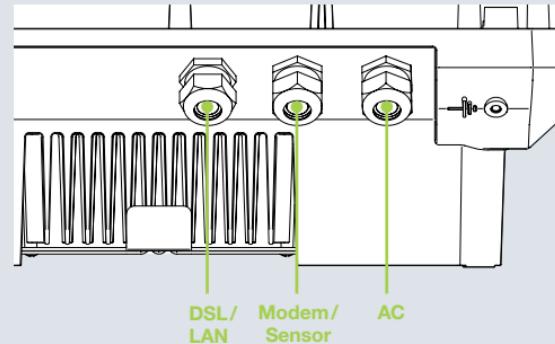

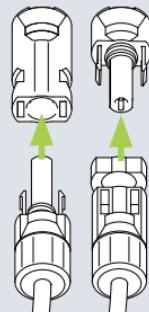

3.0

4.2-20

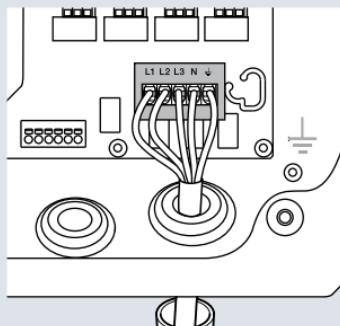

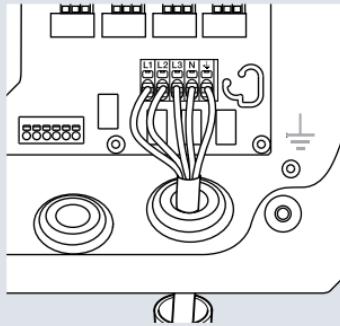

## Connecting DC side

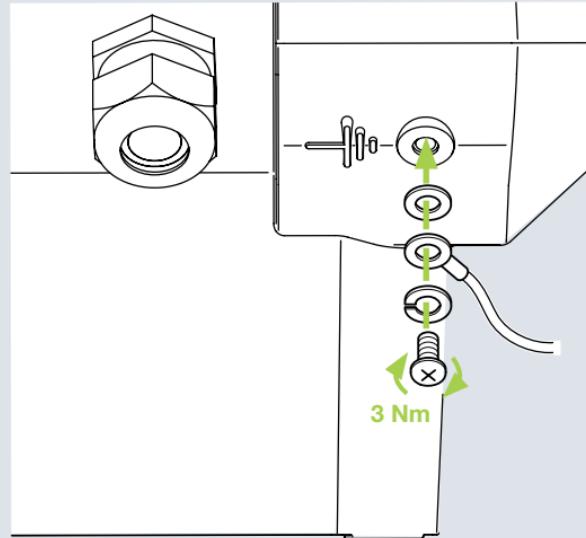

# Country-specific installation

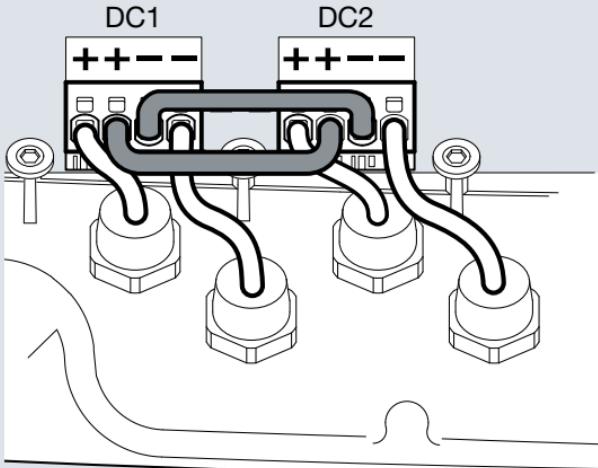

Connecting main cable with sealing cap

Second ground connection

## Option: Connecting DC1 & DC2 in parallel

### NOTE

For PIKO 3.0 and 4.2 the parallel connection is not possible.

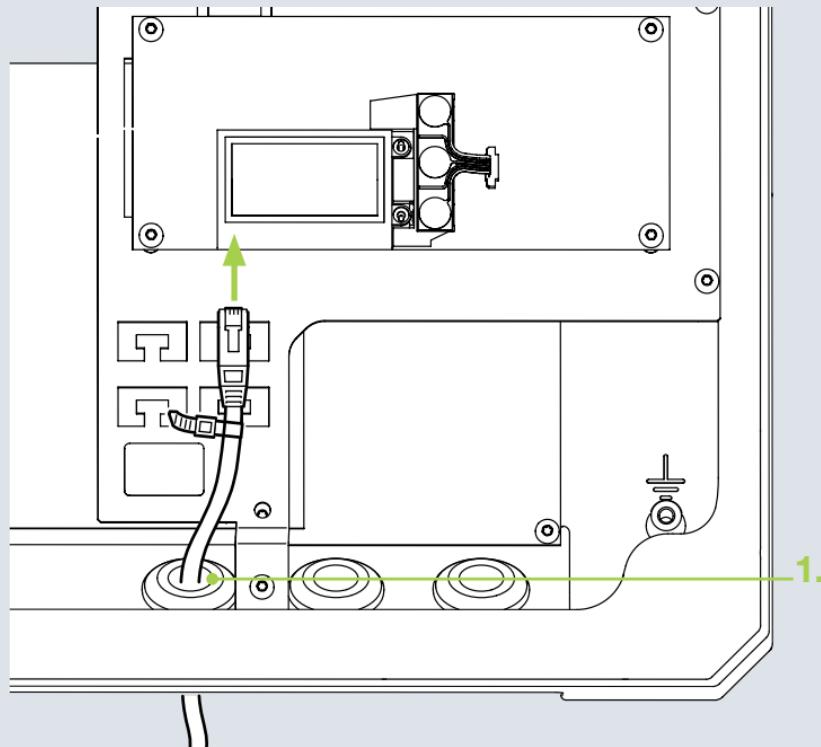

### NOTE

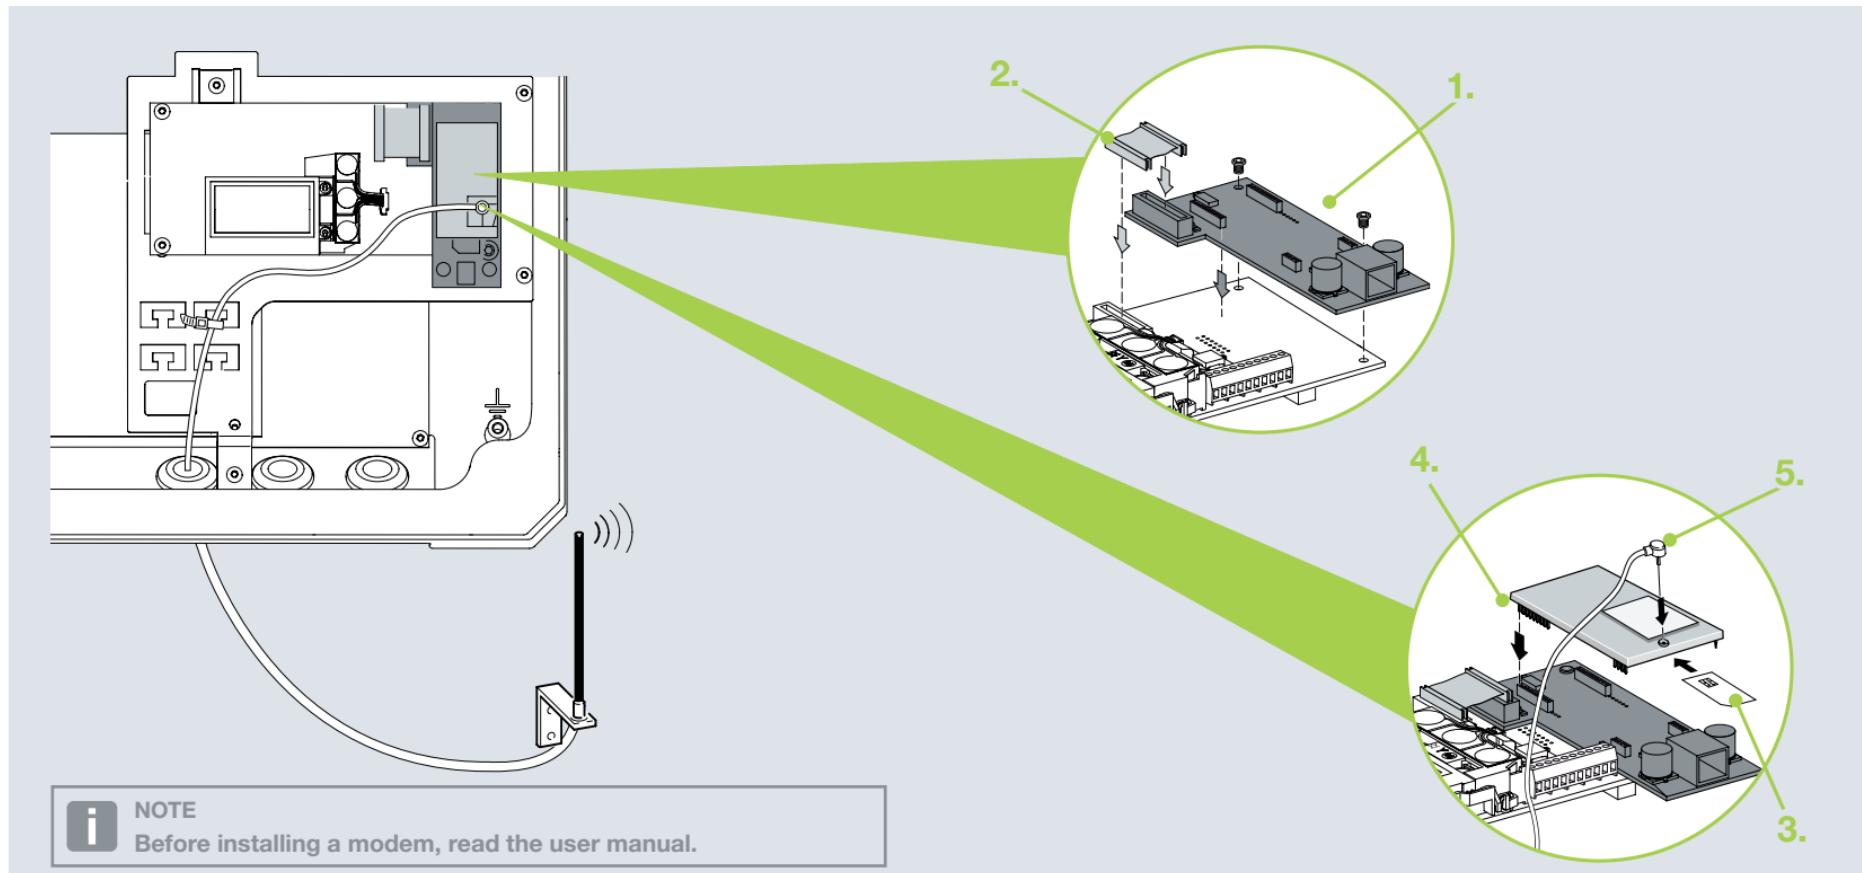

When using the parallel connection this feature must be activated under the menu Settings >> Hardware settings >> String connection >> Parallel connection.

## Data transfer communication board II

### DSL or LAN

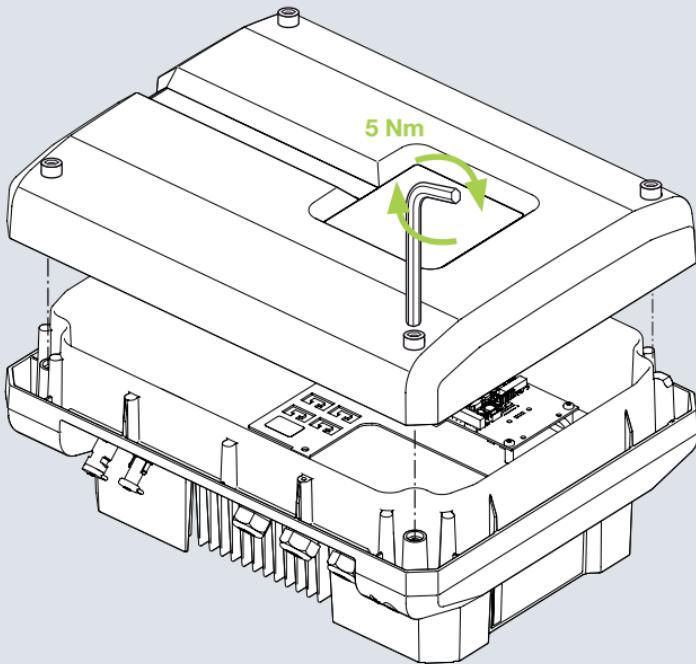

# GSM modem

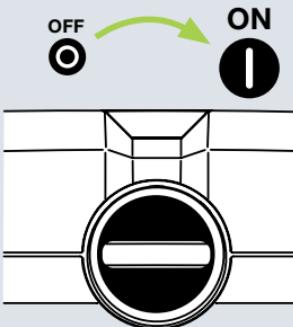

## Commissioning the inverter

<sup>1</sup> It is important that the maximum current load of the DC connector will not be exceeded in a parallel circuit (max. 30 A). This could lead to damage of the device.  
If the DC string input current is higher than the maximum current load of the plug (see manufacturer's instructions), both DC inputs must be used.

Max. installation altitude	m above sea level			2000			
Relative humidity (condensing)	%			4...100			

PIKO Inverter	Unit	10	12	15	17	20
<b>System data</b>						
Connection technology at input side – MC 4				✓		
Connection technology at output side – spring-loaded terminal strip				✓		
<b>Various</b>						
Warranty	Years			5		
Warranty extension optional	Years			10/20		
<b>Ext. current sensor (MBS ASRD 14)</b>						
Rated current primary	A			50		
Precision method				1		
Dimensions (H x W x D)	mm (in)			90 x 105 x 54 (3.5 x 4.1 x 2.1)		
Max. cable diameter	mm (in)			13.5 (0.5)		
Mounting on top hat rail to DIN EN 60715				✓		

<sup>1</sup> It is important that the maximum current load of the DC connector will not be exceeded in a parallel circuit (max. 30 A). This could lead to damage of the device. If the DC string input current is higher than the maximum current load of the plug (see manufacturer's instructions), both DC inputs must be used.
